i ve seen that

Pdf file is about i ve seen that is available in several types of edition. This pdf document is presented in digital edition of i ve seen that and it can be searched throughout the net in such search engines as google, bing and yahoo. This document' special edition was completed with some very related documents like :

the things they cannot say stories soldiers wont tell you about what theyve seen done or failed to do in war, i have seen the future, rich pipeline seen for scleroderma trial results eagerly awaited an, i have seen him in the watchfires civil war series 2, the history of the 21st century the best that civilization has ever seen.

Please check this comparing table with efficiency factors:

The interaction coefficient β is found to be $\beta = \beta_0 \beta_1$. In the envelope equation above, we have retained the full dispersive properties of the problem, just as in the derivation of the uni-ME in the previous section. This may be less relevant for the envelope equation since then, from the start on, the attention is to waves with a sharply peaked spectrum, while uni-ME is valid for waves with a broad spectrum. However, retaining the full dispersion makes it possible to study the influence of truncating the dispersive properties. Indeed, it is custom to expand the dispersion operator to second or third order, i.e. $K^2(\omega) \approx K^2(\omega_0) + \omega - \omega_0 K^2(\omega_0) + \frac{1}{2}(\omega - \omega_0)^2 K''(\omega_0)$, and then satisfies dNLS: $i\omega A + i\omega_0 A + \frac{1}{2}(\omega - \omega_0)^2 A + i|\omega - \omega_0| A^2 A = 0$. Taking $\omega - \omega_0 = 0$ there results the standard NLS-equation sNLS: $i\omega A + i\omega_0 A + i|\omega - \omega_0| A^2 A = 0$; performing a simple scaling transforms this equation to the normalised form $i\omega A + i\omega_0 A + i\text{sign}(\omega - \omega_0)|A|^2 A = 0$. When $\text{sign}(\omega - \omega_0) = 1$, this is known as self-focussing (converging) NLS, else defocussing (diverging). For anomalous dispersion, i.e. $K''(\omega_0) < 0$,

the equation is self-focussing. These equations are well known in optics and have been studied extensively; see e.g. [1, 7, 8]. For sNLS, the quadratic function K_2 is even, which is not the case when the third order dispersive term β_3 is included; with this additional term, the equation is known as the Dysthe equation (dNLS), and is capable to describe asymmetric perturbations.
